

# SUCCESS!!

I, like many of my peers, had always thought of cardiovascular disease as that of a lifestyle disease in which those that made very poor choices were the ones to suffer. I had also learned to believe that my high blood pressure was genetic in nature and was something that I was to deal with for the rest of my life. Having had a very active lifestyle, I was under the impression that my high blood pressure was of little concern and that my diet could not have much of an influence upon it. By the tender age of 22, my perspective would greatly shift to more reasonable thought processes. As I underwent treatment of cardiac arrest, my swift education into proper food choices and the avenues of solutions that modern medicine had perfected since well before my time became my utmost concern.

After many years of ongoing management and failed treatment, gloom and lifelessness became a steady companion. I soon found myself rationalizing that my life was to be much shorter than I had wished and to live my life to the fullest. It was not until I was poked and prodded for CAT scans and x-rays that my partner in crime turned me onto alternative medicine. Desperate, and without much success to continue to believe in the path of modern medicine, I took a leap of faith and began many therapies. It was this path that led me to chiropractic therapy. I was remiss, as I had understood that this was for those much older than myself and for those who have experienced violent automobile trauma. With a gentle nudge and a little bit of faith, I proceeded to undergo care with Dr. Dent. My apprehension was swiftly lifted after one session. The root cause of my health problems, my high blood pressure, was improved so drastically that I was quite light headed after my treatment. Dr. Dent, in all of 30 minutes, did what 4 years worth of medical testing, specialists, and wasted money on drugs could not do.

While still being treated currently, my blood pressure has become normal without medication. All of the associated problems that attach themselves to high blood pressure have also disappeared. I feel that Dr. Dent has awarded me significant gift of many long years of good health ahead. It is much to this that I promote her trade to all that suffer from many health problems. I do those not because I believe all will be solved in this manner, but relief and cure where modern medicine has chosen to treat and endure is worth that nudge of faith that I was given so long ago.

I give my permission to HBCC to share my testimonial in future publications.
